EDUCATION

Universitat de Girona
Computer Science

September 2020 - February 2025

WORK

Amazon SDE I

September 2024 - Present

EU International Commerce, responsible for customer-facing experiences across Amazon's value store worldwide

- Expanded the primary product interface of Amazon's value store to 12 new countries, serving millions of monthly purchases worldwide. Delivered responsive frontend implementation for desktop and mobile, coordinated with QA and PM, and proactively identified legal and accessibility blockers before launch.
- Led a Tier-1 service region migration to 2 new AWS regions. Performed dependency connectivity assessment, redeployed all infrastructure via CDK, resolved cross-region connectivity issues, configured end-to-end customer request routing, and validated with 600+ TPS load testing. Serving 9 European and Middle Eastern markets.
- Resolved a €400k/month legal compliance issue by challenging incorrect requirements, locating integration points across numerous legacy packages which required coordinating with 4 external teams.
- Replaced a third-party pricing library with a self-contained implementation now serving 500k+ daily renders and adopted by other teams. Added discount badge support and migrated string translations to a new platform.
- Reduced onboarding time from 3 days to 2 hours by rewriting technical documentation and dependency installation guides.

Amazon SDE Intern

June 2023 - September 2023

Worked in a labor planning team for logistical centers, investigating how to integrate personalization

- Investigated backend services, legal frameworks, mocked APIs, and implemented a working feature demo used to inform about the potential of integrating skill-knowledge into the labour planning application.
- Made improvements to Java Spring backend and React + RTK frontend improving engineering quality.

Google Summer of Code Contributor

June 2022 - September 2022

Project "LibreCAD3 automatic releases", building a CI/CD infrastructure from scratch

- Modified CMake and C++ code with Qt for the purpose of the application being able to be installed anywhere on the computer by using Qt functions to get the path on execution and removing all the hardcoded paths to the resources.
- Contained the application in NSIS, AppImage and Snap installers as a way to have it easily installable on Windows and Linux via using CPack, snapcraft, linuxdeploy and linuxdeployqt.
- Created GitHub Actions yaml scripts in order to have the LC3 built in Github by user trigger or push.
- Wrote automation scripts for Windows/Linux that reduced new user's install time from a week to an hour.

LANGUAGES

- **Native:** Catalan, Spanish, Romanian **B2:** English, French. **B1:** Russian

EXPERIENCES

Google Developer Student Club Lead and Founder

August 2022 - September 2023

Created a GDSC to have somewhere outside of university to expand our skills through forming a community and creating fun activities for more than 35 participants, through knowledge-sharing and event organizing

SKILLS

- Languages: TypeScript / JavaScript , Java, Python, C++, Bash
- Infrastructure & Tools: AWS (CDK, ECS, CloudWatch, IAM), Docker, Git, CI/CD
